28 Group Overview

/ Our experience. Your peace of mind.

Since 1983, we've supported aircraft owners and operators who need a maintenance partner they can rely on — one who delivers with consistency, transparency, and precision.

Today, Gama Aviation's MRO services support a wide range of business aircraft, offering full base and line maintenance, mobile AOG support, and pre-purchase inspections across the UK and Middle East.

Trusted by private owners, fleet operators and aviation service providers, we keep aircraft flying, compliant, and ready for mission.

/ Our focus is your aircraft availability.

As a maintenance service provider, we understand the importance of aircraft availability — and the value of trust.

Since 1983, we've developed a global maintenance network designed to keep aircraft mission-ready with minimal disruption.

Today, with class-leading facilities and proven capabilities, our clients rely on us for efficient, compliant, and transparent support — tailored to the operational demands of business aviation.

/ Middle East

Sharjah UAE

A photograph of a male technician in a black uniform working on the engine of a white business aircraft. The technician is positioned inside the open engine bay, looking upwards at the engine components. The aircraft's fuselage is white, and the engine bay is filled with various mechanical parts, wires, and hoses. A red warning label "DANGER HOT EXHAUST" is visible on the upper part of the engine bay. The background is a bright, overcast sky.

/ Base maintenance.

/ A partner you can trust.

When it comes to base maintenance, you need more than technical capability — you need a partner who delivers with precision, transparency, and consistency.

At our fully certified facilities in Bournemouth, Glasgow and Sharjah, we offer a complete range of base maintenance services for business aircraft, tailored to minimise downtime and ensure continued airworthiness without compromise.

Our strength lies not just in our approvals, tooling, or experience — but in how we work. From initial scoping through to delivery, we provide clear work statements, accurate cost forecasting, and honest communication at every stage. There are no surprises — just dependable, efficient project execution from teams who understand the demands of operational aviation.

We've built our reputation by being the partner clients trust and return to. We deliver with transparent quoting, clear scopes of work, and precise execution — on time, every time.

/ Line maintenance.

/ Availability where it matters most.

In business aviation, there's no room for uncertainty. Every movement counts, every delay matters. That's why our line maintenance teams are positioned to act — fast, precisely, and without compromise.

Whether it's a routine transit check, defect rectification, or an unexpected issue before departure, our engineers work quickly and effectively to keep your aircraft safe, compliant, and ready for the next mission.

With operations across the UK and Middle East, we provide the continuity and responsiveness your flight schedule demands — supporting you at key locations, seven days a week.

It's not just about fixing problems. It's about preventing them, minimising delays, and protecting availability. That's what we do best — day in, day out.

/ AOG response & mobile support teams.

When your aircraft is grounded due to an AOG event, urgency, clarity, and control become critical. Our Mobile Support Teams (MST) are built to respond fast — resolving issues on site and getting you back in the air with confidence.

Operating across the UK and Middle East, our MST engineers are fully equipped to diagnose and resolve issues at your location, minimising disruption and getting you back in the air with confidence.

We support a wide range of business aircraft types and mission profiles, from private owners to fleet operators, delivering rapid interventions that meet regulatory and operational standards without compromise.

It's more than mobile maintenance — it's dependable AOG support, delivered with the urgency your mission demands.

A large, detailed photograph of a technician in a dark uniform inspecting the interior of a large aircraft engine. The technician is using a flashlight to illuminate the engine's internal components. The engine is mounted on a white aircraft fuselage. The background shows a hangar structure.

/ Pre-Purchase Inspections (PPI)

/ Confidence before commitment.

Behind every aircraft is a story — and not all of it is visible. Our Pre-Purchase Inspection (PPI) service is designed to reduce that risk by uncovering the full picture: airworthiness, compliance, maintenance integrity, and future exposure. We assess every critical system and document, so you know exactly what you're buying — and what you're avoiding.

We act on behalf of lessors, banks, operators, and private owners to help identify high-quality aircraft in a crowded marketplace, drawing on decades of hands-on engineering and regulatory experience.

The result is a comprehensive, independent technical assessment report that gives you a full understanding of the asset you're considering — from airframe to engine cycles — ensuring you're equipped to make the right judgement. This includes:

- Airworthiness and compliance
- Maintenance history and status
- Physical and structural condition
- Real-world value and future cost implications

A pre-purchase inspection isn't a formality — it's your first line of defence. Missed records, hidden corrosion, or undocumented repairs can all turn a smart deal into a costly mistake.

Our inspections go deep, combining engineering expertise with regulatory insight to give you the facts — and the confidence to move forward.

A large background image showing a technician in a dark hoodie working on a complex aircraft avionics panel. The panel is filled with various electronic components, wires, and connectors. The technician is looking up at the panel with a focused expression. The image is split diagonally, with the left side showing the technician and the right side showing the text.

/ Enhancements that elevate performance.

/ Additional services.

Scheduled maintenance is the ideal time to upgrade your aircraft's systems — enhancing performance, connectivity, and compliance without extending downtime.

Our team delivers a wide range of certified enhancements, from cockpit avionics upgrades and cabin connectivity improvements to minor interior refreshes and airframe modifications. All works are supported by our in-house UKCAA Part 21J design and Part 21G production approvals.

We also manage and coordinate full exterior paint and interior refurbishment projects through our trusted partner network — ensuring a seamless experience and consistent quality, with all work carried out under strict oversight.

Whether you're modernising your flight deck, improving in-flight connectivity, or bringing your cabin up to standard, we deliver practical, approved solutions tailored to your mission and operational needs.

A large photograph of an aircraft maintenance hangar. In the foreground, a technician in a dark blue shirt and cap is kneeling on a red creeper, working on the landing gear of a large aircraft. The aircraft's wing and landing gear assembly are prominent. In the background, another technician is visible on a scissor lift, and other aircraft are parked on the tarmac. The scene is well-lit, suggesting an indoor hangar environment.

/ Fleet maintenance.

/ Supporting your fleet.

For fleet operators, aircraft availability isn't just important — it's critical. Downtime disrupts schedules, impacts profitability, and undermines client confidence. That's why you need a maintenance partner who can respond quickly, plan ahead, and deliver with precision — wherever and whenever your operation demands it.

At Gama Aviation, we understand the operational pressures of fleet management. Our agile maintenance teams, located across the UK and Middle East, are equipped to support time-sensitive operators with scheduled inputs, AOG resolution, and mobile engineering support. For high-profile events or periods of peak demand, we can pre-position personnel and resources to ensure uninterrupted availability.

We work as an extension of your operation, providing consistent, compliant service that scales to meet your fleet requirements. From charter providers and fractional operators to specialist air services, our fleet clients rely on us to maintain performance and availability without compromise.

We deliver the support, expertise, and consistency your fleet demands — without compromise.

/ Private ownership, professionally supported.

Managing a private aircraft is complex — whether you're doing it directly or through a smaller operator. When issues arise, having access to a dependable MRO partner makes all the difference.

Our team is on hand to provide on-demand maintenance support across the UK and the Middle East, backed by decades of operational experience and regulatory oversight.

We also offer supplementary services, including temporary charter cover during scheduled checks and support flights during AOG situations — all designed to keep you flying without interruption.

With Gama Aviation, you don't just gain technical expertise — you gain a proactive, responsive partner committed to your aircraft's availability.

/ Our approvals.

/ OEM Type Approvals.

Gama Aviation holds OEM approvals across multiple platforms, reflecting our ability to maintain aircraft to the highest standards through investment in training, tooling, and data access.

- / Bombardier Challenger
- / Bombardier Global
- / Embraer Legacy
- / Embraer Phenom
- / Gulfstream GVI
- / Textron Beechcraft Kingair
- / Textron Hawker

/ Regulatory Approvals

Certified by leading global authorities, our MRO services ensure compliant, high-quality maintenance — wherever your aircraft is registered, based, or flying.

- / UK CAA
- / San Marino
- / BCAA - Bermuda
- / Cayman Islands
- / FAA (Part 19)
- / EASA
- / Isle of Man
- / Guernsey
- / Aruba
- / QCAR

A white private jet is parked on a tarmac in front of a large, dark-colored hangar. The hangar has a curved roof and several large windows. The words "Gama Aviation" are written in white on the side of the hangar, with a red and white logo to the right. The jet is a twin-engine aircraft with a high-wing configuration and a T-tail. It is facing the camera, and its landing gear is visible. The sky is clear and blue.

/ Gama Aviation group overview.

Since 1983, Gama Aviation has supported private individuals, corporations, and governments with aviation services built for mission success.

Today, we are a global group with a singular purpose: to enhance our clients' operational advantage across every stage of aircraft ownership and use.

Our business is structured into five strategic divisions:

/ Aircraft Management & Charter

End-to-end flight operations and charter solutions for private owners and corporate clients.

/ FBO

Ground handling and passenger services at key locations, including our flagship Sharjah facility.

/ MRO (Maintenance, Repair & Overhaul)

Base and line maintenance, AOG support, and engineering expertise across the UK and Middle East.

/ Special Mission

Bespoke aviation solutions for air ambulance, national security, energy, infrastructure and government operations.

/ Technology & Outsourcing

Flight operations support, CAMO, flight planning, and aviation software platforms.

From mission-critical response to private travel, our teams are trusted by owners, operators and agencies who expect more than standard service — they expect performance without compromise.
